Quick Start Setup Guide

Page 1

Trade Smarter with AI

Designed and optimized for Gold trading.
Original tested behavior is preserved on XAUUSD / GOLD, M5.

- 

Open an **XAUUSD / GOLD** chart
- 

Select timeframe **M5** for the original tested setup.
- 

Attach the EA to the chart.
- 

Enable Algo Trading / AutoTrading.

Default Core Settings

- Base Lot (default): **0.01**
- Recovery Multiplier: **1.70**
- Lot recommendation: advisory only
- Chart symbol: detected from the current chart

Best Use

- Recommended market: **XAUUSD / GOLD**
- Recommended chart timeframe: **M5**
- Other timeframes can be used, but M5 is the original reference setup.

Always test on a demo account first. Trading involves risk.

Open GOLD / XAUUSD on MT5, select M5 and attach the Expert Advisor.

Enable Algo Trading and verify the EA status before running a demo test.

Input Settings Guide

Page 2

Trade Smarter with AI

Use Manual Lot as your real trading lot.
The recommended lot is advisory only.

Main Inputs

Base Lot (default): **0.01**

Recovery Multiplier: **1.70**

Magic Number: use a unique value per account or EA setup

Deviation / Slippage: keep a broker-compatible value

Language / display options: set as preferred

How to Configure

- 1 Set your **Base Lot** manually.
- 2 Keep **Recovery Multiplier** at **1.70** unless you understand the risk.
- 3 Use a unique **Magic Number** if running multiple EAs.
- 4 Leave other settings at **default values** unless you are experienced.

Important

The EA **does not auto-apply** the recommended lot.

If your chosen lot is not supported by the broker's min lot or lot step, the EA will stay active but **will not place orders until corrected.**

For the original tested behavior, use **XAUUSD / GOLD** on **M5**.

Choose the Base Lot manually. The guide example shows 0.01.

Recovery Multiplier 1.70 is an example; confirm your installed EA inputs.

Recommended Lot Guide

Recommended lot is for guidance only.
You choose the real Base Lot manually.

Recommended Lot Formula

$$\text{Recommended Lot} = 0.10 \times \left(\frac{\text{Account Balance}}{30,000} \right)$$

Example Table

Account Balance	Recommended Lot
3,000	0.01
6,000	0.02
15,000	0.05
30,000	0.10
60,000	0.20

How to Use It

- 1  Check the recommended lot on the dashboard.
- 2  Decide your own **Base Lot** manually in Inputs.
- 3  Use a **smaller lot** if you want lower risk.
- 4  Recovery uses your chosen Base Lot as the starting point.

Important

Higher lot size means higher risk and deeper recovery exposure.
Always size your lot carefully.

Example: Recommended Lot = $0.10 \times (\text{Balance} / 30,000)$.

This is guidance only, not an independently validated risk model.

Before You Trade

Page 4

Use this **checklist** before running the EA on a live account.

Checklist

- ✓ Open the correct **symbol chart**
- ✓ Use **M5** for the original tested setup
- ✓ Enable **Algo Trading / AutoTrading**
- ✓ Confirm your **Base Lot** setting
- ✓ Keep a stable **VPS** or **internet connection**
- ✓ Make sure the broker allows the selected **lot size**
- ✓ Test on a **demo account** first

If No Trades Appear

- Check whether **Algo Trading** is enabled
- Check whether your **Base Lot** is valid for the broker
- Check the **Journal** and **Experts** tabs for messages
- Wait for valid **entry conditions**
- Use **XAUUSD / GOLD** on **M5** for the original tested behavior

Trading carries risk. Past performance does not guarantee future results.

Confirm chart symbol and timeframe, broker lot limits and VPS connectivity.

Use a demo account first and monitor Experts / Journal messages.
